SSQ

SSQ is one of the world's leading quarriers and suppliers of high-grade, unfading natural roofing slate. Our principal markets are in Europe and North America. Our exports are as far afield as Australia, Norway and Japan - in all, over 20 countries.

Owners, architects and installers choose our slates for their:

- Exceptional colour stability.
- Exceptional weather resistance (surpassing the strictest international standards).
- Suitability for significant historic and distinctive contemporary structures.

Del Carmen, featured here, is one of our signature slates.

Del Carmen

Del Carmen is a single, large quarry – not a marketing brand of a quarry group. We draw from one uniform slate seam (vein) – not from several quarries in a generic deposit sold under one mark.

With over 100 quarries, Spain is the world's largest slate producer, offering slates of all grades. Some suppliers group quarries under a single name or number. Slate from one quarry may be substituted for slate from another. Similar in appearance, characteristics may differ. Often, published addresses are of offices or mills – not of quarries.

At Del Carmen, our name is our address. Our slate comes from the same quarry – from project to project and from decade to decade – guaranteed. Visitors are welcome:

Pizarras Del Carmen:
Ctra. León s/n, 24.746 La Baña, Spain.

Del Carmen quarry, Spain

Trusted source

Del Carmen is one of the slates that has been accepted in the past as a suitable alternative to indigenous slates on buildings of historical significance across the country.

Del Carmen was the first, and remains one of the few, imported slates certified for use in Snowdonia National Park, North West Wales heartland of the famed slate district.

Quality assurance

Tested

Del Carmen has met or surpassed the strictest testing requirements. It has achieved the highest classifications in the US, the UK and France. (See page 8 for details.)

Guaranteed

We stand behind our slate. Consistent with its history of use and test results, Del Carmen's Ultra range is guaranteed to last at least 100 years.

Technical Support

SSQ's technical support team can help you achieve a range of effects on straight or curved surfaces, using standard or special shapes, random widths and/or graduated lengths. Our team is able to supply detailed sketches and advice concerning specification, quantity take-off, cost-comparison and overall strategy, to achieve an optimum installation.

Environment

Roofing slate is naturally green. It is non-toxic, not petrol based and non-leaching. Other roofing products have to be synthesized and then processed. Already formed, natural slate removes synthesis from the equation, reducing CO2 emissions.

Del Carmen's exceptional longevity allows it to do the work of 2, 3 or 4 other roofs. Doing more with less: this is the essence of sustainability.

But we do not rest on the laurels of our exceptional stone. Through a policy of continual improvement, our yields have steadily climbed over the years. We now help to set the standard for efficiency in the slate sector.

In addition to this, Del Carmen production facilities conform to the following standards:

ISO 14001:2004
ISO 9001:2008

Post Office Square, Kent, England

Product performance

Surpasses International standards

Del Carmen has been tested and has met or surpassed the strictest international quality standards:

- US: ASTM C 406 – Grade S1 (highest)
- UK: BS EN 12326 – Achieves W1-T1-S1 (highest classification)
- France: NF 228 – Pass (highest)

Characteristics

Del Carmen is highly resistant to the physical and chemical processes that age building stone of any type. Del Carmen slate is characterized by:

■ Low water absorption (achieves W1 classification)

Del Carmen's low water absorption allows it to withstand freeze-thaw cycling, as well as salt exposure that can weaken more absorbent slates. Del Carmen is well-suited to the harshest climates.

■ High weather resistance (achieves S1 classification)

Del Carmen's exceptional weather (acid) resistance makes it nearly impervious to atmospheric pollutants.

■ High modulus of rupture (achieves modulus of rupture greater than 60MPa)

Del Carmen is unusually strong, surpassing the strictest test requirements. Also, the slate is cut along its grain – an extra precaution that maximizes load resistance.

■ A virtual absence of deleterious minerals such as pyrite and calcite (achieves T1 classification)

Del Carmen's virtual absence of deleterious minerals prevents fading and weakening caused by oxidation and mineral conversion. (Mineral conversion occurs, for example, when calcite in lower-grade slate converts to gypsum, which in turn swells and stresses the slate's substrate causing it to degrade prematurely.)

SSQ Eagle, Berlin, Germany

Selections and thicknesses

Heavy Ultra

8-10mm

Minimum sorting required. Maximum consistency of thickness and planarity at an extra cost. Strong shadow-line; appropriate for most designs.

Heavy

7-9mm

Robust. Moderate consistency of thickness and planarity for a textured presentation and an especially strong shadow-line; appropriate for most designs.

Selections and thicknesses

Ultra

5-6mm

Minimum sorting required. Maximum consistency of thickness and planarity at an extra cost for the most subtle presentation; especially appropriate for mansard and other steep roofs with minimum foot traffic, or where weight is a concern.

First

5-6mm

Moderate sorting required. Highly consistent thickness and planarity at a moderate charge for a subtle presentation; appropriate for mansard and other steep roofs with minimum foot traffic, or where weight is a concern.

Selections and thicknesses

Celtas

5-7mm

Customary sorting recommended. Moderate variances in thickness and planarity for a textured presentation and a moderate cost; especially appropriate for mansard and other steep roofs with minimum foot traffic, or where weight is a concern.

Dimensions and weights*

Size (inches)	Size (mm)	Selection	thickness (mm)	weight per m2 (kg)
24x12	600x300	Ultra	5-6	36.5
20x12	500x300	First	5-6	40
20x10	500x250	Celtas	5-7	42
18x12	450x300	Heavy	7-9	45
16x10	400x250	Heavy	8-10	55
16x8	400x200	Heavy, Ultra	8-10	57
14x8	350x200			
12x8	300x200			

Please contact us if you require other sizes, thicknesses or shapes.

*All dimensions and weights are nominal approximations. Slates are cut to metric measure.

Notes

Colours and textures have been rendered as accurately as possible; the photographic process and the nature of natural stone prevent exact representations.

Being a natural product, slate's physical and chemical characteristics can vary.
